EMPLOYEE MANAGEMENT

11 · Expense claims

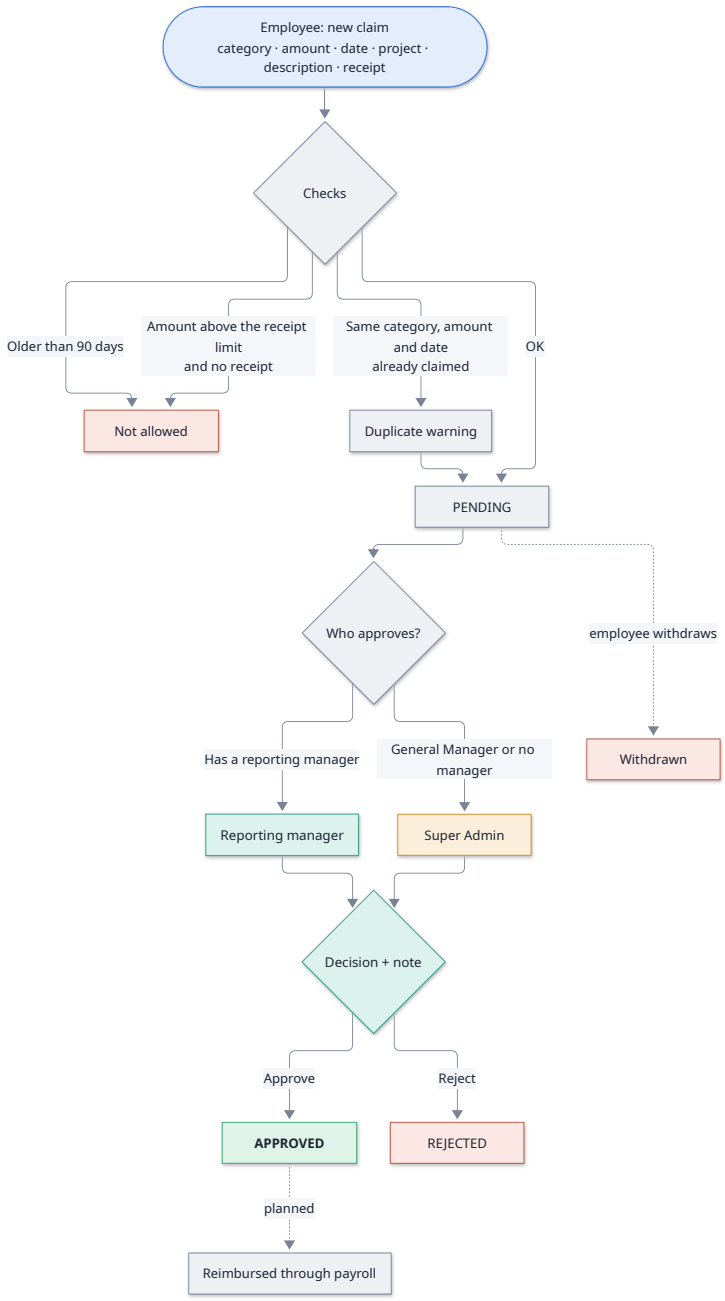

How an employee claims money spent for work, and how it is approved.

Used by	Employee claims · Manager approves · HR Office Admin categories and dashboard · Super Admin senior claims
Frontend	`/expense/new`, `/expense/claims`, `/expense/approvals`, `/expense/dashboard`, `/expense/categories`, `context/ExpenseContext.tsx`
Backend	Phase 4

In short

1. The employee enters category, amount, date, project, description and attaches a receipt.
2. The claim goes to their **reporting manager** (the General Manager's claims go to Super Admin).
3. The approver approves or rejects with a note. The employee can withdraw while it is pending.

The flow

Rules

- **Categories** (managed by HR/Admin) have a limit per currency (AED for Dubai, INR for Kochi) and can be switched off.
- **Receipt required** when the amount is above the category limit or above 200 AED / 2,000 INR, whichever is lower.
- Totals on the dashboard are kept **per currency** — AED and INR are never added together.
- HR and Admin can file a claim on behalf of someone else.

Not in the frontend yet — decisions needed

- The screen says over-limit claims need an **extra management approval**, but it is not implemented. Confirm the rule.
- Withdrawing deletes the claim; the backend keeps it with status Withdrawn (for audit).
- Receipts are not stored; reimbursement is not linked to payroll.
